

## Bamboo

### Technical features

colour	: 1801 - 1820
production method	: tufted
pile material	: 100% bamboo
pile height	: 40 mm
pile weight / m2	: 3800 gram
total weight / m2	: 5300 gram
number of colours	: 20
maximum size without seams	: 450 cm width, length unlimited
cleaning	: professional cleaning recommended
design	: Felix Diener and Ulf Moritz

### Durability

The Bamboo has been tested by TNO and is suitable for the private market.  
This rug can be used with under-floor heating.

### Maintenance

- It is important to vacuum your rug at least once a week to prolong its durability. The most effective way to remove dirt and dust is with the furniture cleaning attachment provided with your vacuum cleaner. A vacuum cleaner with a standard nozzle tends to remove less dirt and dust.
- Never use a rotating vacuum brush on this quality; this will permanently damage your rug.
- Bamboo yarn produces more fluff than woollen yarn. This fluff does not affect the quality of your rug.
- The ideal air humidity is around 50%. Please note that if the air humidity is below 50%, the material becomes dry and its natural elasticity will decrease.
- If rubber soles are frequently walked over a Bamboo rug, it will wear quicker, especially if rotating or shifting movements are consistently made in one place.
- In order to prevent heavy use on one particular location, we recommend turning your rug around once in a while.
- The Bamboo rug threads (1.8 million per square metre) are made of 100% bamboo fibres. If the yarn gets wet it will take a few days before it is fully dry. In the meantime the rug *should not be rubbed*, as the structure may change.

Due to our use of natural materials, slight colour differences may occur.
