28 is an exploration of fabrication process which is part of Arbel's quest for specificity in manufacturing. Instead of designing form itself, here the intent was to design a system that produces form. Arbel developed a method that has loose parameters built into it which produce a different shape in every iteration of the fabrication procedure. Thus, every 28 made is formally different from any other 28 in existence.

Individual 28 pendants result from a complex glass blowing technique whereby air pressure is intermittently introduced into and then removed from a glass matrix which is intermittently heated and then rapidly cooled. The result is a distorted spherical shape with a composed collection of inner shapes, one of which is made of opaque milk glass and houses a low voltage (12V, 20W) xenon.

Standard 28's are made with clear glass exterior spheres and milk white interior glass cavities. Custom 28's are possible with infinite versatility in colour compositions, sizes and shapes.

APPLICATIONS

The 28 surface mounted light is designed to be used as a wall and ceiling treatment for a wide range of environments. Use it as accessory lighting in living rooms, hallways or as decorative lighting in building lobbies and other spaces. Individual 28 surface mounted lights gain tremendous strength when clustered and multiplied.

MATERIALS

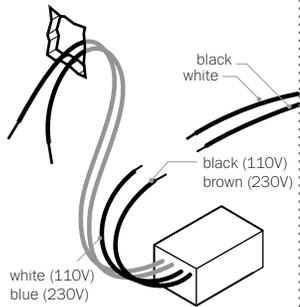

Cast glass and electrical components.

* Unless otherwise specified, a single class 2 transformer will be sent for every three sconces.

1

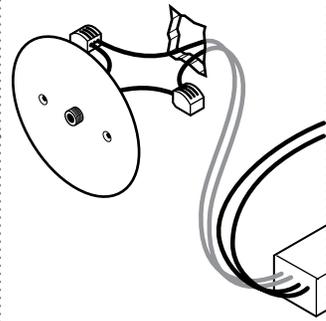

Mount transformer remotely and route output wiring from transformer to surface mounted light location.

Note: Up to 5 surface mounted lights may be connected to a single transformer.

For 110 V, connect black wire to the black wire and white to the white wire.

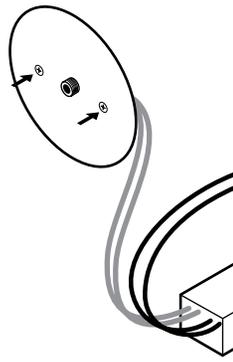

For 230 V, connect black wire to the brown wire and white wire to the blue wire.

Note: Standard junction boxes are not compatible with the 28s. The surface mounted light cover plate mounts directly to the wall. Transformers must be remote mounted in a close by, accessible and hidden location for ease of long term maintenance. Installation to be done by certified personnel to insure compliance with the code.

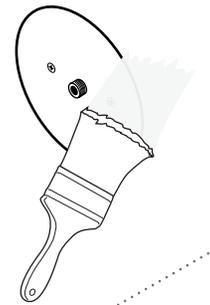

2

Join transformer wiring to cover plate wiring using connectors provided.

3

Tuck wiring into wall opening and affix the cover plate with fasteners provided.

4

Paint over the cover plate to match the wall finish.

Note: as an option, drywall putty or paintable silicone can be used to smooth the transition between the edge of the cover plate and the wall. Use paintable silicone for outdoor installation.

Bocci 24.1 long life bipin xenon lamp included.

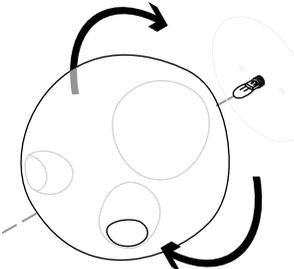

Plug the lamp into the socket.

Do not touch the lamp with your bare hands.

Purchase replacement lamps online at www.bocci.ca/lamps

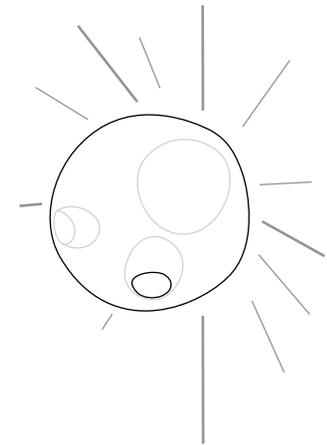

Please note: when using a dimmer use only low voltage electronic dimmers to ensure the fixture works properly.

20W
Bocci 24.1
long life
xenon bipin

5

Gently thread the glass onto cover plate. Do not tighten past the point of contact.

6

Clean fingerprints from glass surfaces.

Turn fixture on.
