± 165 (6.5")

577 (18.5")
707 (27.8")

approx 130 kg (291 lb)

PENDANTS: sixty-one

CANOPY: white powder-coated round canopy 707mm (27.8") diameter and 53 (2") deep

LAMPING: 1.8w LED (110w total)

DIMMING: dimmable - use electronic low voltage dimmer only

CABLE LENGTH: Up to 3000mm (10') standard. 30550mm (100') custom max.

INSTALLATION: jack-connected (lengths set during production)

MATERIALS: blown and dipped glass, cast borosilicate glass cap, white powder-coated steel hardware and swag hooks, braided metal coaxial cable, aircraft cable, electrical components.

WEIGHT: approximately 130 kg (291 lb)

TRANSFORMERS: integral

DESCRIPTION

57.61 designates a fixture with sixty-one 57 pendants suspended by a white powder coated canopy. This fixture is designed to be horizontal, meaning that the pendants don't hang directly below, but instead trail off across a space, around a corner or simply deviate from their gravitational directive. As such, this fixture is designed to be hung from any number of optional swag points mounted elsewhere from the canopy.

57 is an exploration of a technique of making analogous to that used for producing closed cell foam. The process involves trapping voids of air of different sizes and configurations within a glass matrix, yielding a shape loosely referencing a rain cloud. These pockets of air remain invisible when the piece is off, but come alive to reveal an interior universe when the piece is illuminated. By virtue of the fabrication process, each piece made is completely unique from any other piece ever produced.

57 is a blown white and clear glass pendant dipped in grey glass which houses a low voltage, replaceable, dimmable and proprietary LED lamp. Individual pendants have a spatial presence on their own, but their strength lies in their ability to cluster them very close together in cloud-like formations.

NOTES

- + Preset lengths may have a variance of +/- 100mm (4")
- + Bocci recommends LED drivers be remote mounted when possible.
- + one LED driver sent for every 12 pendants in remote-mount installations.
- + Requires composition of the semi-rigid coaxial cable.
- + Shortest and longest coax lengths specified by client with 10-20% additional length to be adjusted on site. Drop lengths specified in 10'/3m increments and are cut to length on site with steel cable cutters (cutters not supplied).
- + Purchase replacement lamps online at www.bocci.ca/lamps

57.61

PRODUCT SPECIFICATION

1

Measure and mark the light fixture canopy position on the ceiling.

Note: The client is responsible for providing a robust 3/4" (19mm) plywood backing or wood blocking to securely anchor to the structural substrate.

Connections from the plywood to the structural substrate are the client's responsibility. Measure the plywood so that it fits within the canopy side walls (refer to detail above).

Anchor the plywood backing to the structural ceiling substrate.

Remote mount

Direct mount

Connect LED drivers inside the canopy to line voltage. Match black wire to the black wire and white wire to the white wire.

For the ground connection, connect the green wire with yellow stripe to the bare copper wire or green wire in the junction box.

Note: As an option, Bocci recommends mounting transformers remotely in a close by, accessible and hidden location for ease of long term maintenance. Installation to be done by certified personnel to ensure code compliance.

3

Anchor canopy into the plywood backing using the fasteners provided.

4

Mark a point directly above the pendants desired location and screw the swag hook into the ceiling using the fasteners provided.

Ensure that the ceiling is sufficiently strong enough to hold 1.2kg (3lbs).

5

Insert the end of the aircraft cable into the small hole in the swag hook and tie a knot in the aircraft cable at the point at which you want the pendant to hang.

Tighten the set screw until snug, and turn another half turn. Give the aircraft a quick tug (approximate the weight of the pendant) to make sure the connection is secure.

The pendant should be hanging from the aircraft cable now.

6

If not using a swag hook, Unthread the outer sleeve on the jack connector to reveal the same small screw and set screw set up as the swag hook. Thread the aircraft cable through and tighten the set screw until snug, and turn another half turn.

Thread the outer sleeve back over the male jack, and connect to the female jack in the canopy.

7

Remove the glass cap by turning counter-clockwise and set aside.

Note: throughout the installation, be mindful not to damage the glass cap and do not lose track of it, its size was chosen specifically for this pendant.

8

Locate end of aircraft cable (drop lengths are in excess of specified drops) and loosen the set screw holding the aircraft cable into the hardware. Pull the aircraft cable through the hole until the pendant is hanging at the desired height. Tighten set screw until snug, and then turn another 1/4 turn.

Spool remaining aircraft cable and fit it into the glass cap for adjustments later.

Repeat steps 1 - 5 until complete.

9

Very carefully uncoil the braided coaxial cable in a spool like manner. Insert your index fingers into opposite sides of the roll then rotate your fingers around each other to unroll the coaxial cable. Use patience: allow the cable to uncoil completely to avoid kinks.

10

Each coax length terminates in a "headphone jack" connector, which plugs into a receptacle in the canopy. After plugging in each length, turn the threaded sheathing into place, wiggling back and forth to ensure that it is adequately tightened.

Compose the semi-rigid coax according to the intended design aesthetic.

11

Form a crook-shape in the coax right above the lampholder pinching it together over your index finger or thumb. The lampholder should be roughly 90 degrees to the rest of the length of coax.

Bocci 24.2 LED

12

Bocci 24.2 1.8w LED lamps included.

Plug the lamp into the socket. Do not touch the lamp with your bare hands.

Purchase replacement lamps online at www.bocci.ca/lamps

Note: when using a dimmer, use only low voltage electronic dimmer to ensure the fixture works properly.

13

Insert the lampholder into the pendant through the hole in the centre of the cap mount. Set it in such a way that the crook rests parallel to the cap mount and runs through the slot with the lampholder inside the pendant perpendicular to the cap mount.

14

Put the cap back onto the pendant, ensuring that the coax remains seated in the slot. Thread the cap onto the mount.

- DO NOT OVERTIGHTEN. There should be a 2mm gap between the cap and the pendant with the coax emerging from inside.

15

Clean fingerprints from glass surfaces.

Turn fixture on.
